Trans. of Teploenergetika (USSR) 1959 [v. 6] no. 7, p. 65-69.

The combined BPK-VTI salts concentrator for testing samples of feed water and condensate is described. Experiments show that the BPK-VTI concentrator acts identically irrespective of the nature of the impurities in solution, and that above 4.85 atm the BPK apparatus becomes unstable. With the combined apparatus the most favorable concentration factor was 18 to 20, the basic flow rate 25 kg/hr, and the pressure of the heating agent about 13 atm. The stabilized concentration process for a test sample with various impurities permits the apparatus to be used for continuous control of (Engineering--Mechanical, TT, v. 5, no. 9) (over)
